Time Series Analysis For Bitcoin Price Prediction Using Prophet

This comparative study is systematically executed, centering its examination on the specific domains of: modeling inputs along with modelling methods, pre-processing techniques, and Visualizing the data. The results are obtained by applying various Deep learning techniques and assessing their reliability in predicting the price of Bitcoin over a period of time.

Users may experience the model's proficiency

in capturing and adapting to both short-

term and long-term trends within the

Bitcoin market.

The Tech Enthusiast:

time series analysis

tool that matches my

interest in exploring

cool innovations."

opportunity in using Prophet for predicting

Bitcoin prices. It could

be a game-changer for my business."
